

Hisab Kitab API - Product Requirement Document (PRD)

This document defines the complete scope of the project. Not every feature will be built immediately. We will first complete the MVP (Minimum Viable Product) and then gradually add advanced features. Each module below includes its purpose and whether it belongs to MVP or a future version.

Module 1: Authentication (MVP)

Handles user identity. Users can register, login, logout, change password and securely access the application using JWT tokens.

Module 2: User Profile (MVP)

Stores user information such as name, email and profile photo. Users can update their profile and delete their account.

Module 3: Categories (MVP)

Provides default expense categories (Food, Travel, Bills etc.) and allows users to create their own custom categories.

Module 4: Income (MVP)

Users can add, edit, delete and view income records like Salary, Freelancing, Bonus and Gifts.

Module 5: Expenses (MVP)

The core module. Users record every expense with amount, category, date, description, payment method and optional receipt image.

Module 6: Dashboard (MVP)

Shows overall statistics such as total income, total expense, savings, monthly summary and recent transactions.

Module 7: Accounts (V2)

Separate money sources like Cash, Bank Account, UPI Wallet or Credit Card.

Module 8: Budget (V2)

Allows users to set monthly/category budgets and receive alerts when limits are crossed.

Module 9: Analytics (V2)

Generates weekly, monthly and yearly spending reports for charts and insights.

Module 10: Search & Filters (V2)

Advanced searching by date, category, amount, payment method or description.

Module 11: Notifications (V2)

Budget reminders, monthly reminders and important alerts.

Module 12: Export (V2)

Export reports to PDF, Excel or CSV.

Module 13: Recurring Transactions (V3)

Automatically creates repeated entries like Salary, EMI, Rent or Subscriptions.

Module 14: Admin Panel APIs (V3)

Manage users, view application statistics and moderate the platform.

Module 15: Security Enhancements (V3)

Email verification, password reset, rate limiting, activity logs and session management.

Database (Initial MVP)

users, categories, incomes, expenses. Later versions will introduce accounts, budgets, notifications, refresh_tokens, activity_logs and admin tables.

Development Order

1. Understand APIs & HTTP
2. FastAPI Basics
3. Authentication
4. Profile
5. Categories
6. Income
7. Expenses
8. Dashboard
9. Database Optimization
10. Advanced Modules
